

OPERATIONS AND TECHNOLOGY PERFORMANCE IMPROVEMENT

Most companies spend between 4% and 7% of revenues on technology annually and few are able to articulate the value received from that investment. Many stand to gain by leveraging their technology to drive operational improvement and increase business value.

Technology has become fundamental to the way companies do business, and plays a critical role in every aspect of business operations. With the growth of the importance and role of technology in the operations of many enterprises, the associated costs and risks have increased – as has the opportunity to leverage operations and technology investments to reduce general operating costs, create new competitive advantage, and ultimately drive increased value of the business.

Operations and Technology Performance Improvement helps companies rapidly identify opportunities for technology to drive real business improvements, develops achievable action plans to do so, and helps companies implement those action plans and realize results.

As Operations and Technology Performance Improvement does not sell technology or services, we can provide truly objective and independent advice as well as unbiased oversight of the efforts of technology and service providers.

What Operations and Technology Performance Improvement offers:

- Performance Improvement Opportunity Identification and Technology Needs Assessment
- Operations and Technology Performance Improvement Roadmap
- Technology-Enabled Business Process Redesign
- Technology Selection

- Increased operational scalability without incremental investment
- Improved projections
- Improved materials planning and reduced inventory

With lower technology costs and fewer headaches

About Pathfinder Advisors

Pathfinder Advisors is dedicated to helping equity investors, boards of directors, senior business executives, and technology executives in every industry spend less on operations and technology while at the same time driving business improvements that increase both top-line and bottom-line performance.

Founded in 2010 to bring Big 4 quality and experience to the middle market, Pathfinder Advisors offers our clients the means to enhance the value of key business events such as mergers and acquisitions, post-merger integration, and turnarounds and restructuring by leveraging the strengths and capabilities of operations and technology, drive business value by optimizing performance of operations and technology, and reduce costs of acquiring and managing operations and technology assets and services.

Pathfinder Advisors offers a unique advisory experience in which experts do the work rather than those seeking to gain expertise, we bring in valued partners to provide additional expertise even if our revenues realized from the engagement are reduced, and we work to deliver immediate and tangible value rather than to jockey for additional work.

Operations and Technology Transaction Support

Operations and technology can tip the balance of the outcome of virtually any strategic transaction, make a good deal great or a great deal one for the history books. Operations and Technology Transaction Support is investment thesis-driven, results-focused, and available 24/7/365.

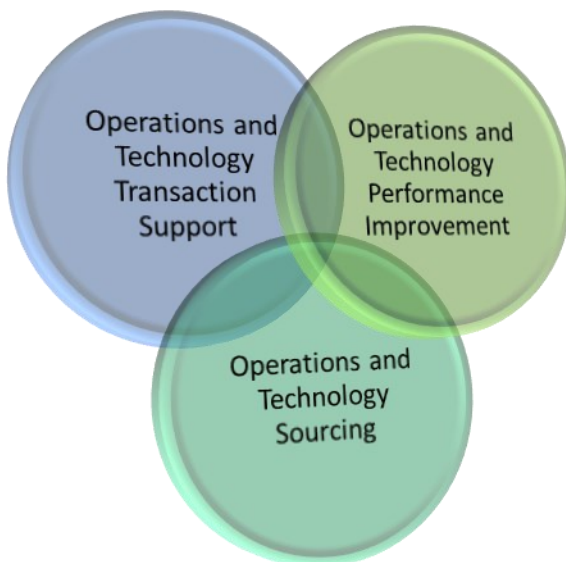

Operations and Technology Performance Improvement

Most companies spend between 4% and 7% of revenues on technology annually and few are able to articulate the value received from that investment. Many stand to gain by leveraging their technology to drive operational improvement and increase business value. Operations and Technology Performance Improvement helps companies rapidly identify and realize opportunities for technology to drive real business improvements.

Operations and Technology Sourcing

Companies often spend millions every year on technology, property, plant, and equipment and pennies managing that spend. Annual investments this large deserve more attention. Operations and Technology Sourcing provides objective and independent assistance in managing the entire sourcing process and delivery of acquired products and services.
